Learn Chinese Max Hobbs November 17, 2019 You're here because you want to know everything about the Chinese alphabet, right? Let's get stuck right into something because there are a lot of amazing things to talk about! Chapter 1 - The Story of Chinese Characters / Alphabet Chapter 2 - How to Learn the Chinese Alphabet? Chapter 3 - How logical is the Chinese language? Chapter 4 - How many letters are there in the Chinese alphabet? Chapter 5 - Radicals in Chinese Chapter 6 - Closest to the Chinese alphabet - Pinyin Chapter 7 - More examples of Chinese Alphabet Chapter 8 - Top 10 most common Chinese characters Chapter 9 - EXPERTS: What They Said Hour 10 - Funny Mistakes from Chinese Students - Avoid This! Chapter 11 - Further reading? Chapter 12 - What about Chinese numbers? Chapter 13 - The Chinese alphabet is a frequently asked question, and rather watch than read? Our video covers everything you need to know OK in the first place let's set the record straight. 我 - Refers to me, mine or me in Chinese In English we have 26 letters in the alphabet, in Russian language we have 33 in the Cyrillic alphabet, but ... There is no such thing as the Chinese alphabet. Chinese is all about symbols and we don't put them together as we do with letters in our alphabets to make a word because these characters actually make up the words ourselves. Each character has one syllable. One character in itself may be a word, but many words consist of two, three or even more characters combined. There is no Chinese alphabet - only thousands and thousands of characters. Some of the characters look remarkably similar as well! Check it out below. Chinese characters who look similar Chinese characters who look similar before getting into juicy stuff, it's worth taking a step back and looking at Chinese history. After all, the country exudes history and culture, and Chinese characters and language play a huge role in this. Chapter 1 - History of Chinese characters/Chinese alphabet Look at how the characters evolved over time Chinese is one of the oldest in the world. Unlike many languages, Chinese does not have an alphabet, and it is not written as a series of letters, but rather as a series of photos that make sense and sounds. KNOW- Historians have found an ancient Chinese alphabet of written writing that dates back more than 3,000 years, however the modern script of the letter we recognize today is about 2,000 years old and was developed during the Han Dynasty. Of course, like all languages, the Chinese alphabet evolved in the 2000s since the clerical script was first created. The characters written have become written scripted for many different contemporary languages, such as Cantonese (native language in Hong Kong and Guangdong, China) and Kanji (Japanese characters). In mainland China, these symbols continued to evolve until 1950, when simplified Mandarin symbols were introduced to reduce illiteracy in China. These simplistic symbols are commonly used in China today, today, traditional symbols are still used in Taiwan and Hong Kong. Chapter 2 - So if there is no Chinese alphabet, how do we begin to learn Chinese? Student Maggie demonstrates her Hanzi Good question, and the answer is simple (in theory anyway)... We start studying the characters from the beginning. As you begin to take in your first 10, 20 Chinese characters you will begin to realize these characters appear in many words, and some characters even have exactly the same sound. How can that be? Let's try to explain without giving you too much 头疼 (tu t'ng) that headache in Chinese by the way! Let's take the most basic Chinese character: (I mean one) Great, we learned our first Chinese character. It means that every time I see it, it means it's something out of something, right? Incorrectly. Since there is no Chinese alphabet, the characters can be combined together to make another word. The saving grace is that it follows logic in general. Explain: This is a symbol meaning common or common: 共 Gyung So we have now learned two Chinese characters, but we are about to learn our third word, and it's just putting these two characters together to do ... 共 (I'm Gyung) Does anyone guess about the meaning of the 共? It means quite. Logical. This is the case in point for quite a few of all your Chinese studies, you put the characters together that you have already learned to make new words. So far we have learned two characters, but actually know a total of three words. As you build your knowledge of Chinese characters you will see the characters come together to make new terminology and you will get to the point where you can make a strong educated guess about what the word means even if you don't know for sure. Let's try to give another example: two new characters for you: 时 (Shaw means time) and 区 (I mean area) So we have two characters with our own value individually, time and scope. But what happens when we put these two symbols together? What does 时区 mean? 时区: The Sho means the time and the area of the time zone together, meaning time zone in Chinese. So despite the lack of a physical Chinese alphabet there is a great element of consistent thinking when it comes to learning Mandarin. How to Learn Mandarin - Beginner's Guide, written by the founder and owner of Expert LTL Andreas, has worked with the Chinese for many years and nowhere fast. Years later he found a way ... and wanted to share it (hence the birth ... Chapter 3 - How logical can Chinese characters be? It's easy to look at a Chinese article, newspaper or even a sentence and say: No, this language is not for me, but listen to us. Despite the sheer number of characters there are so many great examples of how clever the Chinese alphabet can be... Let's take the word for Electric - 电's diode Let's take these words: Vision - 视 sh'Brain - 脑 nǎo Shadow - 影 yǐng OK, we took four new words. Now for each of these three words we're going to place a word for electric in front of it to make new word you may be able to guess from English Literal Electric - Vision - TV 电视 (dì'nsh) Electric and Brain - Computer 电脑 (diànnǎo) Electric - Shadow and Cinema 电影 (diànyǐng) It really doesn't get much more rational than that! So although the Chinese don't have an alphabet where you put letters together to make words, instead they have several characters you do the same with. Some words consist of only one character, the other of two or three (maybe even four or five in rare cases). Chapter 4 - How many letters are there in the Chinese alphabet? Chinese characters who look similar This question many people ask before starting out their Chinese studies. If you read this far you will know that this question has no answer due to the lack of a Chinese alphabet. This, however, doesn't stop us getting stuck in some rooms to see how wide and in depth Chinese can go. Don't let this put you out though... Talking day-to-day Chinese you can handle quite comfortably with about 500-750 Chinese characters to your name. 2,000 Chinese characters - number you need to read newspaper 2,633 Chinese characters - the number of characters you must know to pass the HSK 68.00 exam 0 Chinese characters - the number educated Chinese person is know 20,000 Chinese characters - a number of modern Chinese dictionary would use But how many Chinese characters are there in total? These numbers are higher, big, but they seem like the minute we quote you these two numbers: Let's start with the Great Collection of Chinese Characters, in Chinese Hànyǔ de zìdiǎn (汉语字典). They cite that the number of existing Chinese characters is actually 54,648. Wait. We're not done yet! The dictionary of the Chinese form version, in Chinese Jūnghuà z' hǎi (中华字海) takes things to another level, however. This rather tame dictionary includes definitions of just 106,230 characters! So if you've ever asked how many letters in the Chinese alphabet you can not only claim that the question is actually wrong, but you can dismiss some huge numbers on them, on them to get them well and truly intimidate! Oh and while we're at the numbers, let's quickly distract - finishing the score this video on how easy it is to learn great Chinese numbers! back to the alphabet ... In terms of studying Chinese numbers is not so complicated, let's paint a picture ... There are 6 HSK exams for foreigners. HSK 1 is the most basic, HSK 6 most complex. Here are the general requirements for each of them. You can learn more about the HSK exam by visiting our dedicated HSK page. As you'll see above - when it comes to learning Chinese, once you have a few hundred under your belt, you'll have a decent job of day-to-day knowledge, and that will grow steadily. You'll get used to seeing how the structure of the characters are built and get from the strokes that are included, and that brings us to our next topic of discussion... Chapter 5 - Radicals: What are radicals in Chinese? Language? there is a great way to give out that character if you are not quite familiar with it, but before we get into that let's give you a definition of radical when it comes to studying Chinese characters: This is taken from a Wikipedia article about Chinese radicals... Chinese radical (Chinese: 部首; pinyin: bùshǒu; literally: section of the headline) is a graphic component of the Chinese character, under which character is traditionally listed in the Chinese dictionary. This component is often a semantic indicator (i.e. a symbol value indicator), although in some cases the original semantic relationship has become unclear due to changes in the meaning of the symbol over time. Let's look at a few examples: here you'll see three strokes. It's radical in Chinese and it applies to water. This means that any character you see with these three strokes on the left side of the character has something to do with the water. This is great because even if the character is unrecognizable to you as you learn more and more you will realize that because the water is radically turned on you can narrow down the options on what the character can be. Here are some examples of water radical in action Liquid: 液 - y'River: 河 - h'Foam or Bubble: 泡 - p'o So now you want to know how many radicals there are in Chinese, right? In total, 214 康熙字典 in the traditional radical system of Kansu. Some appear on the left side of the character, some from above, bottom or right, and some much more often than others. Some radicals are not as obvious or clear as water (sorry for the pun), but have some form of basic meaning. Here are a few more examples of more obvious radicals: Radical for Human 亻 (r'n) An example of what radical in action is the nature of 你 which means that you (nǐ) Radical for Ice is 冫 (byung) The example of this radical in action is the nature of 冻 which means freeze (dēn) Radical for the door 门 (mun) An example of what radical in action is the nature of the 间 that the room means (gio) LOOK AGAIN - As the third radical 阝 surrounds the character to
