When you go to work, your cervix will start dilating (aka hole and thinning) in preparation for your baby's arrival. It's basically unlocking the way to exit your child's route - and women are usually asked to click when they're 10cm extended. But what does that really mean? Well, writing on the popular Facebook page, Prego and Mummy Chat, one mother explained: 'People always wonder what the extension looks like. Here's a visualization... She accompanied her post with a visual guide to the complex topic of cervical enlargement, which used banal objects - such as cheerios and bagels - to give moms to be some idea of how big their cervix would get during childbirth. And, overall, it left many Facebook users shuddering. Wow - we don't think we'll ever look at bagels the same way again! Somewhat unsurprisingly, the reaction to the informative post was mixed. One mom-to-be said: Thanks for scaring the PKK out of me, my cervix will be the size of a bagel in a few weeks! A way to scare new moms to be,' said another. Omg I'm not even pregnant and this picture makes me cringe. Good luck, ladies, commented another prankster. People always wonder what expansion looks like. Here's a visualization of But one seasoned veteran had a few words of advice for all pregnant women caustic about their upcoming... amm, bagels. Don't be afraid, she said comfortingly. Just remember your breath and you'll be just fine. Don't let all the stories get to you. Many have blown out of proportion. Just relax, don't stress. That's what women do from the beginning. Most people know that a 10cm woman is usually told to start pushing. You can really click before that when you feel like it. Most people don't know exactly how big 10 cm. Here are two charts I found showing you what the extension looks like. From Facebook from the Infant Center ----- Gentle Embrace Birth offers childbirth, breastfeeding, and neonatal care classes and support. This visual guide to Labor's progress shows each of the 10 centimetres of dilation in actual size. Includes delivery time and provides a percentage of erasure for every inch of dilation. Includes an image of the head of a fetus seen at full dilation. Ideal for learning about dilation, erasing, stage of labor, and fetal position. Bilingual English/Spanish. 13 panels. This visual representation of cervical enlargement is aimed at raising children, human growth or child development course! Allow students to explore parts of labor and delivery in a fun creative manner. Want to turn this visual guide into action? Buy our cervical enlargement sheet where a couple of students create their own visual representations of cervical enlargement. Purchase sheet on this link - This visual guide to Labor's progress shows each of the 10 centimetres of dilation dilation actual size. Includes labor time and provides a percentage of erasure for each centimeter of dilation. Includes an image of the head of the fetus, seen at full dilation. Ideal for learning about dilation, erasing, stage of labor, and fetal position. Bilingual English/Spanish. 13 panels. 6 x 6. By introducing parents to the natural process of childbirth, you can reduce fears and increase your sense of preparedness. Stunning 3D animation of the baby in the womb will help you teach the four stages of childbirth. Combined with real birth shots, this comprehensive program shows common emotions during childbirth, demonstrates survival techniques, and provides useful tips to support people. If you are looking for the latest, most comprehensive and professional way to teach the stages of work - here it is! FEATURING: Stunning animation of mother and baby gives a realistic look at the anatomy and physiology of birth All new birth shots and interviews with reliable families Early/active labor information is updated through new research adding the fourth stage of childbirth, including physiological changes and giving more attention on the skin to skin contact and keeping mother and baby together after birth BONUS Digital posters These bright graphs allow for the contents of the contents of the pregnancy, cervix, vagina, mucous fork, placenta, umbilical cord, amniotic sac and fluid-to-labor Signs - Braxton-Hicks cuts, lighting, mucous fork, other signs of labor onset contractions, water disturbance, COAT Four stages of labor - review, duration of labor first stage - reduction, cervical erasure and extension, support, support, the fruit position of the second stage - reduction, emotions, support, pelvic floor, bony plates, coronation, birth of the third stage - skin-to-skin contact, placenta fourth stage - involution, afterpains, breastfeeding Click to see the USB video of the Requirements Of Closed Age 13 - adult price 289.95 I love this new version of Stages Labor. The animation is much better, and illustrating the support role of the partner in each very useful. I am very pleased that you have added up to the date and valuable content on the third and fourth stages, emphasizing mother and child mutual interaction. And the variety of families (always wonderfully represented in InJoy products) makes this film applicable and appealing to all. I will happily use this film in all my childbirth classes and Doula trainings. - Penny Simkin, PT, CD (DONA), Author, Co-Founder of DONA International, Senior Faculty and Namesake Simkin Center for Allied Births Profession and Baster University Bronze Health Award and Wellness-Telly Awards Mediation Guide with Parents Handouts: Menu Home/Educational Materials/ Cervical
